

Individual Reflections

2021-03-28 (Week After Easter break)

Felix Nilsson

Structure:

A: The current situation or "what is".

B: What you want the situation to be or "what might or should be".

A→B: A plan for getting from where you are to where you want to be or "feedback designed to reduce the gap."

- What do I want to learn or understand better?

A: I know more about webdev now, but still need to improve.

B: I would like to be able to feel the somewhat of the same confidence and achieve the same development/problem solving speed which I have with procedural languages such as Java and Python. (Same)

A→B: I will study online material on web development and try to gain some insights. (Same)

- How can I help someone else, or the entire team, to learn something new?

A: Hopefully, I can draw on some of the technical experience I have and help the team via problem solving, bug fixing and such. I do not have any duties to manage the team in some way and as such can focus entirely on the development process. (Same)

B: I would like to be a productive member of the team and help lead the product in a meaningful direction. (Same)

A→B: I will do this by sticking to the plan laid out by the team, and using our DOD, not being late to complete tasks.

- What is my contribution towards the team's use of Scrum?

A: As I don't have any admin role, an example of my contribution has been that I can help break down user stories into realistic tasks and judge their difficulty.

B: I feel I have come a long way since we started, but I would still like to get more experience in scrum and use it to its full potential.

A→B: I will attend the lectures and exercises explaining scrum and if necessary, I will study other online material, as well as communicating with my teammates if there are any hiccups.

- What is my contribution towards the team's deliveries?

A: My contribution is that I am a flexible team member that can work efficiently.

B: I hope that I will have a good conception of how the product should look in the future and a solid understanding of how long a development of some task takes.
(Same)

A→B: If the task is being worked on by more people than just me I will communicate with them so that we can cooperate, and finish the task on time.
