

***What do I want to learn or understand better?***

- A) This week was really the first proper week where I've worked with a particular user story for the explicit value creation for our Product Owner. It worked quite well, and I could apply some of the things I picked up from the documentation and videos during week 4. Particularly, it felt to actually do something concrete and practical instead of just reading up on the theory. I also made sure to ask specific questions when my team partner used code that I did not understand, so that I may be able to apply it elsewhere at another time. Along with this, I also felt that I became significantly more comfortable with the usage of GitHub this week.
- B) I still feel like it's noticeable that I'm quite behind in programming proficiency. I would like to remedy this so that the rest of the team members feel like they can entrust me with more advanced tasks.
- C) I need to keep reading up the documentation, watch videos and keep asking questions that provide me with learning opportunities.

***How can I help someone else, or the entire team, to learn something new?***

- A) I'm having a difficult time coming up with a specific new thing here, rather than just being of general help.
- B) For next week, I want to have an area in which I feel experienced and able to convey new, specific things for my teammates to learn from.
- C) Keep trying to become more experienced in React, maybe do some practices online.

***What is my contribution towards the team's use of Scrum?***

- A) I'm assigned the role of Scrum Master. I wanted to come up with a good structure for the meetings before Monday this week, but I didn't really have time. I think all our various meetings could benefit from standardization.
- B) I want our meetings to become more standardized so that they are more effective, and so that everyone feels a sense of direction and not just aimlessly jumping between the various points we have to discuss.
- C) Prepare the meeting structure beforehand, particularly the Mondays with Sprint Review and Planning. Check with the others as to in which order points should be addressed, and discuss with the team if they feel any improvement in the meetings.

***What is my contribution towards the team's deliveries?***

- A) Me and Sara worked on a login-page with a hard-coded user whose credentials were required to access the rest of the page. This is one of the features required for the booking page to work at all. It was fun to do something tangible. It took us a bit more time than we estimated, but we still felt that we learnt and contributed to our team.
- B) For the next sprint, I want to feel as though I am more prepared for the user story ahead of me. For the effectiveness in the project, I would like to be assigned a user story which I feel comfortable in performing.
- C) Attempt to be assigned a good user story based on my own skill set, after establishing it in the meeting with our product owner on Monday.
