

Individual Reflections

2021-05-01

Felix Nilsson

Structure:

A: The current situation or "what is".

B: What you want the situation to be or "what might or should be".

A→B: A plan for getting from where you are to where you want to be or "feedback designed to reduce the gap."

- What do I want to learn or understand better?

A: Currently using the server is the newest part, and I am not good/inexperienced at writing code utilizing it.

B: I would like to be able to contribute code that works well with the server, and the data we have stored.

A→B: I need to learn from our team member William who implemented it, and probably also do research on my own.

- How can I help someone else, or the entire team, to learn something new?

A: Same as last week, I feel my best quality is that I am efficient at bug fixing and handling errors.

B: "It's better to catch the errors before they are errors".

A→B: By continuing to code and experiment you catch a lot of errors, and as time goes by you stop making the same mistakes, and you notice when other people make them.

- What is my contribution towards the team's deliveries?

A: This week I specifically worked on a search function that lets a user find a locale to book based only their input time span, which was an important feature according to PO.

B: I still need to improve it further by adding a way for the user to properly title their event like the way they do in other parts of the website.

A→B: I will make sure to discuss it next week with the group and see if we can add it as a user story.

- What is my contribution towards the I team's use of Scrum?

A: (same as last week) I think that I help with producing constructing user stories that have clear acceptance criteria's, without unnecessary "gold plating".

B: I would like to be able to formulate them in a better way. With the template "as an X I want Y since Z", you often get a very general Z for example.

A→B: I will listen to the product owner and hear his reasoning.
