What do I want to learn or understand better?

A) I don't know how it works when you set up your code on an actual webpage. The student union IT-department has a web hotel that one needs to be able to handle when setting up your webpage.

B) I want to know how the web hotel works, so that if it's ever necessary for me to manage the web page, like when we actually launch it and new bugs are found, I am able to do it.

C) Poke around on the web hotel and see if I can manage to figure out how to work it. Ask William or someone else for help if needed.

How can I help someone else, or the entire team, to learn something new?

A) Everything in the code is almost finalized, and we feel comfortable in delivering our product.

B) As I enjoy doing presentations, I hope to spend the next week mostly preparing the presentation and hopefully being able to share some presentation techniques to anyone who also wants to present alongside me.

C) Make the presentation as good as it should be by receiving and providing feedback to whoever performs the presentation with me.

What is my contribution towards the team's use of Scrum?

A) Much the same as the previous few weeks. I maintain meeting structure, and I now also am better at keeping watch of the trello board.

B) With regards to this project, I feel that I am at a point where I'm contributing as much as I should. In a new project, I may have wanted more specific responsibilities in my role. However, it is now at the end of the project and I am content with what I contribute.

C) In a future project, make sure that the roles are more well-defined from the start, to enable me to contribute more effectively when it comes to scrum.

What is my contribution towards the team's deliveries?

A) This week, I was to contact the student union IT department and get them to help us set up the site. As they were slow to answer and the others in my team were quick to perform their own user stories (rendering us essentially completely done with the programming), I haven't done too much with the technical of the project this week. It has mostly just been to stay in contact with the team to make sure everything goes well, and to maintain the quality of our meetings.

B) Next week, I want the page to be set up on the real website, so that we can properly test it and also show it during the presentation. I also want to prepare the presentation in a way that makes the value of our product to our product owner very clear.

C) Do whatever I can to make sure the page is set up. Going to the Chalmers student union IT department offices may be required. Prepare the presentation.
