What do I want to learn or understand better?

A) I now feel a bit more confident in the languages and libraries we use, but I do not yet know too much about how the server functions. It's still a new concept to me.

B) I want to understand more about the server and its functions. It will probably play a larger part of the coming user stories, so it's important to be familiar with it.

C) Ask William, who has done most of the work on the server, for explanations on the various aspects of the code.

How can I help someone else, or the entire team, to learn something new?

A) As assigned Scrum Master I feel like it is important that I sometimes stop, take a moment and make sure that everyone is on the same page. This can be applied on a smaller scale, like specific tasks of a user story, to the bigger picture, like the overall direction of the project.

B) I want everyone to always be comfortable asking questions, so that we foster an environment where we are able to learn from each other and where no one is left behind when they don't understand.

C) During our meetings, be extra mindful in making sure that everyone understands everything that is being said. If someone seems like they don't fully grasp what we're talking about, ask if they need another repeat or clearer explanation. This ensures that everyone is always on the same page and that we continuously learn new things individually.

What is my contribution towards the team's use of Scrum?

A) This week I did a bit of preparation before the various meetings in regards to the respective meeting structures. My hope is that this will standardize our meetings, so that they are more effective and we can put effort into other aspects of the project.

Even though the meetings are becoming more standardized, which is good, we feel that the roles in the team are not being utilized as well as they could.

B) I wish to maintain and enforce clear structure during the meetings, so that we may become more effective. I want us to be more specific in our team roles, so that we may work more effectively individually and together.

C) Be strict during meetings so that we do not stray from the topics we need to discuss. Do a proper re-evaluation of the roles on monday.

What is my contribution towards the team's deliveries?

A) This week me, Kristian and Sara worked on the implementation of an admin account, and particularly with the ability for the admin to be able to manipulate the bookings of every user.

Even though it's more difficult for me to contribute as much as the others towards our deliveries - since I need to put in more hours to provide the same amount of progress - I'm doing my best and feel that my efforts contribute towards the overall project.

B) For the next week, I would like to see if I can do more work on my own. It would be interesting to see if I'm able to effectively work alone rather than in pairs, so that I may determine what the most effective approach is for the rest of the sprints.

C) During the Sprint Planning on Monday, watch for any good user stories which I might feel comfortable doing alone and write myself up on one of those.
