What do I want to learn or understand better?

A) Now that we are finalizing the project, I realize I mostly just know how the parts of the code I worked on actually work.

B) I would like to know more about how most of the code of the project works. It's not too much to go through, and since me, Måns and Felix are the ones who will continue and actually implement the webpage in our coming work with MK, it's important that we know how it works.

C) Make sure that, before the project is finished, we have a run-through of all the classes and functions of the code, so that we know what to do if something goes wrong or if we would like to update it.

How can I help someone else, or the entire team, to learn something new?

A) The last few weeks we have been very comfortable in producing user stories. Even though our roles still aren't too defined, I feel that we are working very effectively, and if we were to start on a new project today we would know how to set it up properly and work effectively from the start.

B) Things are going well right now. When it comes to the project, I don't think we currently are in a position where we need to teach each other new things that we already haven't. Rather, we need to finalize what we are doing.

C) Maintain the team spirit and effort all the way towards the end of the project.

What is my contribution towards the team's use of Scrum?

A) Because of our more standardized meetings, I can contribute by maintaining the structure and keeping our meetings effective.

There have been cases where I haven't had enough watch on the trello board so that it matches our current situation. As Scrum Master I have a bit more responsibility here.

B) In regards to the meetings, I feel like things are where they should be. Our meetings work well now and are much shorter than before, as a result of being more effective.

When it comes to the trello board, I should be more updated and continuously move around the cards activities so they match up when someone else has missed it.

C) Look at the trello board more often. Reach out to people with their name on the cards when I think something doesn't add up.

What is my contribution towards the team's deliveries?

A) Last week I said that I wanted to try a bit more work on my own. However, when we were choosing user stories I didn't really feel comfortable doing any of the user stories established on my own. Me and Sara worked on being able to edit your own personal user information, but since we didn't have a run-through of how the server worked until after we had finished our user story we had to get quite a bit of help from William to complete it. I also personally had a surprising amount of trouble with getting GitHub to sync properly, which meant I had to spend a lot of hours on it which slowed down our progress. It should be fixed now, hopefully.

B) We are nearing the end of the project, and most of the functions that our Product Owner wants have been implemented. To contribute going forward, I should be a part of the less technical aspects of the work that are needed to finalize the project.

C) Take part in the particular finalizing aspects of the project where I can be most useful, like being in contact with the student union IT department as to how to set up the page on an actual URL.
